

Everything you need to communicate in one place

2S Unified Communications as a Service (UCaaS) is a cloud delivery model that offers a variety of communication and collaboration applications and services. Everything integrated in one place. Bring people together from anywhere, using any device, with integrated collaboration and enable the home office.

What are unified communications services?

People work together in different ways. And they use numerous collaboration tools: IP telephony for voice calls, web conferencing and video conferencing, voice mail, mobility, desktop sharing, instant messaging and more.

UCaaS is a unified communications solution that combines a cloud-based phone system with collaboration and conferencing tools. With a UCaaS solution, companies simplify their operations, gain flexibility to scale, improve user support and reduce the cost of communications and collaboration.

What is the difference between UCaaS and UC?

It's all about implantation. UC and UCaaS provide companies with a unified communication experience; they are deployed only in different ways. UCaaS is a hosted solution offered as a service that offers a level of flexibility and customization to IT teams.

Simplify infrastructure and operations

Stop managing multiple systems with a variety of vendors and simplify your IT infrastructure with a UCaaS solution. Not only will you reduce the time spent managing multiple vendors, but you will also benefit from a true unified communications platform, saving both time and money.

For employees, 2S' UCaaS service package improves overall user productivity by providing easy-to-use communication tools. When deployed and adopted, UCaaS users become more efficient, freeing up more time on the workday. Unlike many other providers, we focus on adopting users to help them actually use the service, so that you get your ROI.

Unified Collaboration

With Cisco Webex Teams applications, you can call, chat, video conference, and start interactive online meetings from anywhere, from any device.

Callings

Calls, at your desk or on your cell phone, are mandatory for proper communication. With Webex Calling we manage your communication services efficiently and with encrypted security from end to end on calls, while delivering a set of advanced business telephony and collaboration services on all devices, such as smartphones, desk phones, wireless devices. audio and video in meeting rooms, with the possibility of receiving and switching business calls between them.

Unified Communications Manager

Cisco Unified Communications Manager (Unified CM) provides reliable, secure, expansive and flexible session management and call control.

What are the benefits?

- Trust that your data is safe. Cisco data center providers employ stringent security measures and high-level experts continually monitor their networks for vulnerabilities and threats. The cloud offers the ultimate in security for UCaaS platforms.
- Switch from a CapEx cost model to OpEx. Instead of investing in more hardware, which is often difficult to justify with today's tight IT budgets, UCaaS shifts costs to more flexible operating budgets that are easier to manage and control. It is also more economical to provide PBX service from within a shared data center environment.
- Quickly provision new users or offices. It is also easy to deploy services as needed, whether for new employees, opening new offices or for provisioning services for leaving employees and closing offices.
- Get predictable prices. A consumption model offers predictable and paid prices based on usage, and in many cases, you can take advantage of consolidated licensing plans that are much easier to manage.

2S helps you plan and manage your cloud migration, find the best connections to your data centers, and conduct a thorough analysis to ensure you achieve maximum ROI.
