Increases network efficiency and reduces costs

The 2S Infrastructure as a Service (IaaS) solution offers an enterprise-level capability configured to meet the needs of your business.

The network is the essential and main part of business operations.

Today's users demand 100% network services available wherever they are, from shopping malls to offices and homes. In a culture increasingly dependent on mobile and internet-connected devices, the ability to connect and manage these devices easily and securely can literally make the difference between your organization's success or failure.

Monitoring and managing a corporate network infrastructure can be complex, expensive and time-consuming. Without the resources needed for internal IT to proactively monitor and manage a network environment, they increase the risk of system downtime, reduced revenue and potential brand reputation.

Infrastructure as a Service

That is why the 2S IaaS Solution offers the complete portfolio, with LAN, Security, and Wireless Networks as part of its digitization strategy, without overloading the internal teams. With proactive 24x7 management and monitoring, problems are quickly identified and isolated before they affect business operations, offering:

- Better network performance
- Agile deployment and expansion of LAN, Security and Wireless networks to new sites
- Frees internal IT staff from troubleshooting and maintenance
- Reduces TCO (Total Cost of Ownership)
- Layered plans and service to meet your organization's needs
- Ability to manage mixed environments: on-premises, in the Cloud and hosted

Next-generation security

Our experts provide a complete set of network security services, ideal for protecting distributed sites, campuses and data centers.

- Application-based firewall and traffic control

- Content filter

- Safe Search

- Web Cache to speed up frequently viewed content

Cloud-Managed LAN Switching

The Cloud Managed LAN Switching solution offers performance, zero-touch provisioning, visibility and remote troubleshot.

- Security and application control

- Network topology

- Integrated toubleshoting tools

Business outcomes
e Benefits

Iaas (Infrastructure as a Service) provides near real-time management information and 24x7 self-generated graphical reports. The unified management dashboard also provides asset lifecycle and request management tracking, ensuring that you have the data you need to make timely and informed decisions.

Your business achieves

- Reduction in operational expenses associated with the day-to-day operation of your wireless LAN infrastructure.

- Reduction in capital expenditures associated with the integration of your wireless infrastructure.

- Improved end user experience and productivity across the wireless LAN area.

- Management view oriented to near real-time data and graphical reports available 24 hours a day, 7 days a week.

- Helps mobile and remote workers maintain the same productivity, even away from the office.

- Enables proactive problem solving before impacting your business.
